# IMPERA Line Management

IMPERA Line Management is an encompassing software ideal for packaging lines. It monitors processes and controls all devices involved in these processes, e.g. printers, hand scanners and inspection systems. Visualisation, operation and control of the components take place on the GUI.

PRODUCT HIGHLIGHTS

Combined audit trail for all level 1 components

EU/2011/62
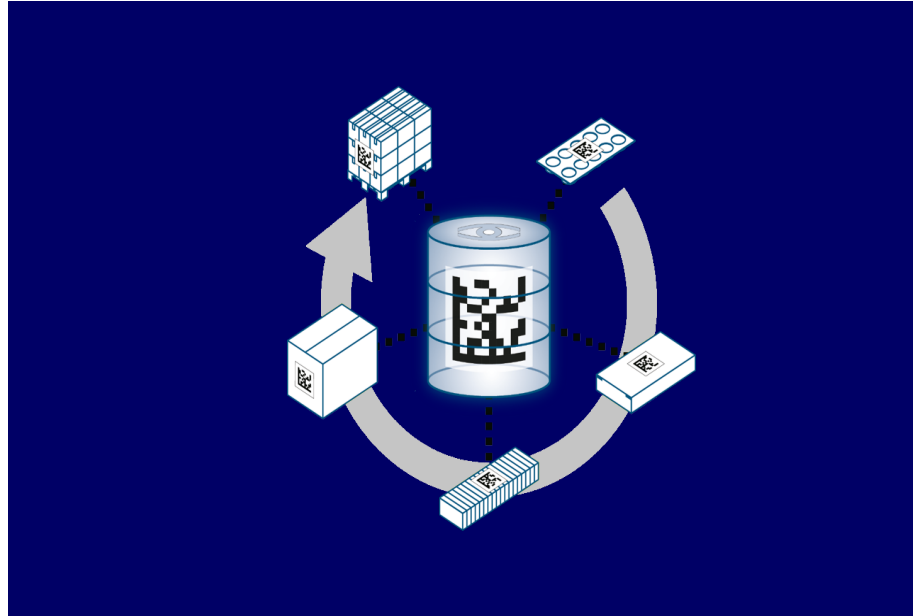

serialisation

Batch management with level 3 import and export

DESCRIPTION

• Implemented coding standards: GS1, IFA, CIP 13, ITS, Bollino, IPZS, Royal Vignette Belge, Lot- and Date-Control
• Undertakes all data transfers between the manufacturer's data base and the devices
• Complex and multi-level data connections can be made in order to provide information to ensure traceability of all steps in the process
• Job-related and intuitive graphical user interface

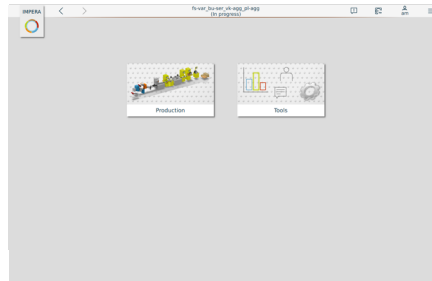

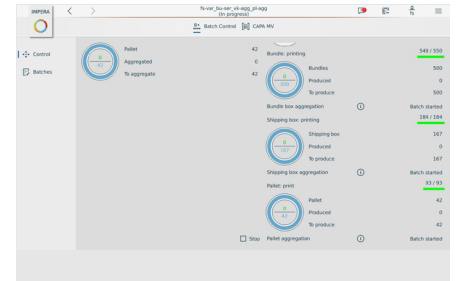

LEVEL 3 INTERFACE

ON SITE

IMPERA is designed to be as versatile as possible. Depending on your site and line specifics, the required software modules are combined to exactly fit into your workflow. This includes data management, interfaces and communication methods.

IMPERA Start screen

The batch control view shows status information on print inspection, manual aggregation etc. for all packaging elements of the currently active batch

SCANWARE HIGHLIGHTS

Highest security & failure-safety

Partnership & Trust

In-house development

Customisable to optimise productivity

User-friendly & intuitive
